

COST BENEFITS

Hazardous materials, such as asbestos, present significant dangers and challenges on a day-to-day basis, as this waste must be carefully contained and sealed from the external environment. At Transtox we have designed a product that eliminates this problem.

For the majority of Transtox customers that are not a government body, the most valued question we expect to be asked is about the cost of our product.

The cost of our bags is passed onto the client you are contracted to – however, the cost paid for our bags is significantly less than the costs associated with current handling practices of asbestos waste, resulting in greater profit margins for your business.

The brilliance of using our bags is the COST SAVINGS you will achieve due to overall convenience and ease of use. This is repeated down the line through all persons involved right up to, and including disposal.

Transtox bags require less labour, and are easy to set up and fill. Each contains an internal 200um polythene plastic bladder; inside an outer heavy duty sealable zip top bag, with four point lifting slings.

Current methods of bundling and wrapping asbestos is labour intensive, requiring that bundles are double wrapped, no higher than 500mm, and bundles remain intact during disposal.

Transtox products are the most valuable asset to any business – we have worked alongside various industries throughout our history and have witnessed first-hand the vast methodological problems that arise.

Transtox is a simple, yet effective solution to a genuine issue encountered by all involved in this industry and will alleviate the impact it has on our working environment.

FEASIBILITY

The Table below compares the costs you currently incur using current methods of packaging asbestos, to the costs you will incur using a Transtox Asbestos Bag:

Option 1

Current Method Using Construction Plastic	AUD
Roll of Polythene 200um	\$92.73
2 x Roll of PVC Duct tape	\$9.63
1 x Tradesman wage for one hour minimum	\$45.00
Tradesman Superannuation 9.5%	\$4.28
Workers compensation insurance on labour (8.893%)	\$4.38
Excluding GST	\$156.02

Option 2

Using Transtox Skip Liner (4 Cubic)	AUD
Excluding GST	\$141.80
Total Including GST (RRP)	\$156.00

Total Cost Saving of Feasibility **\$14.22.**

Note that the above estimates that it only takes one hour to bundle, and wrap the asbestos, depending on the efficiency of the tradesman, and the nature of the task, it would generally take longer than an hour, increasing the cost savings.
